

**Influenza-like-illness (ILI) and Severe Acute Respiratory Infection (SARI) surveillance, Week 11 (9 – 15<sup>th</sup> Mar, 2015)**

**Synopsis**

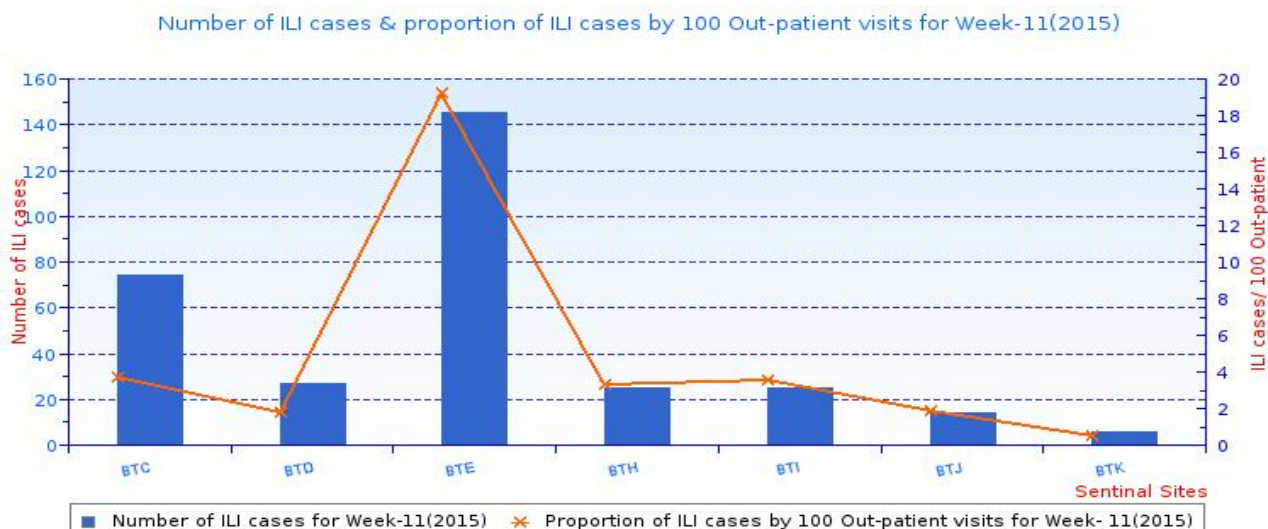

The incidence of ILI and SARI for the week was 41/1000 outpatient visits and 7/100 hospitalized patients respectively. The highest incidence of ILI and SARI cases were reported from Trongsa and Paro Hospitals respectively. The ILI cases were commonly observed among age group 15-29 years while SARI cases were observed among 0-1 years age group. From **36** samples received and tested by Real-Time RT-PCR, positivity rate was **52.78%**.

**Influenza Like-Illness (ILI) surveillance**

Average ILI incidence in the sentinel sites for the week was 41 cases per 1000 outpatient visits which is higher to the previous week (Figure 1). The highest ILI incidence for the week among sentinel sites was observed in Trongsa Hospital (145 cases) followed by Paro Hospital (74 cases). All the seven sentinel sites (Hospitals) have reported for the week (Figure 2).

**Figure 1:** Average number of ILI cases reported for week-11 and previous weeks. (Data source: **Online** weekly reporting from sentinel sites.

**Figure 2:** The number of ILI cases reported by sites (Data source: **Online** weekly reports from sentinel sites).

### 1. Severe Acute Respiratory Infections (SARI) surveillance

Average SARI incidence in the sentinel sites for the week was 7 SARI cases per 100 hospitalized patients which is higher than the previous week (Figure 3). The highest SARI incidence for the week among sentinel sites were observed in Paro Hospital (6 SARI cases). Thimphu, JDWNR-Hospital has not reported for the week (Figure 4).

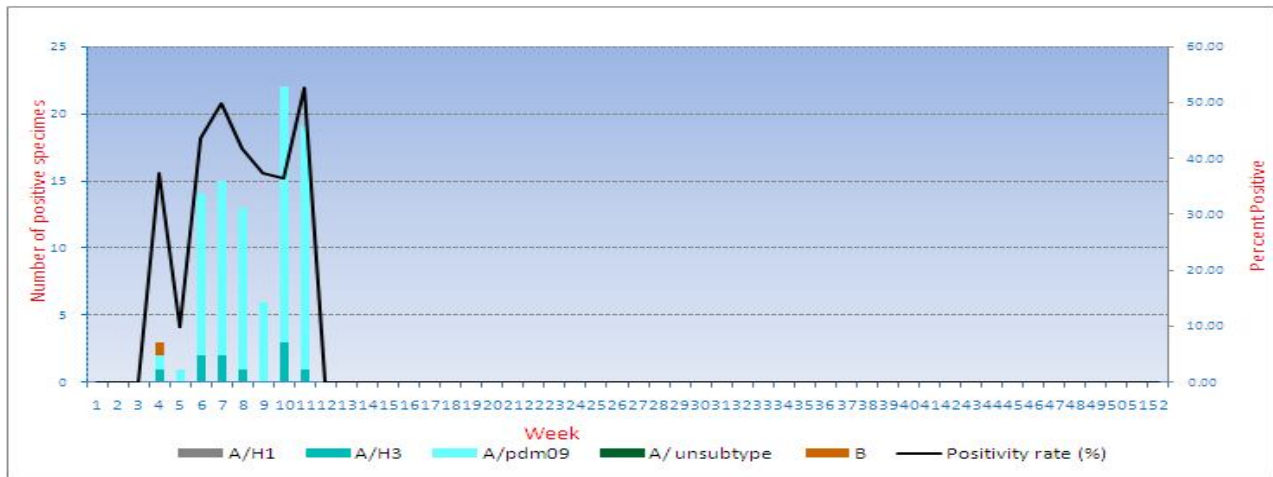

**Figure 3:** Average number of SARI cases reported for week-11 and previous weeks (Data source: **Online** weekly reporting from sentinel sites).

**Figure 4:** The number of SARI cases reported by sites (Data source: **Online** weekly reports from sentinel sites).

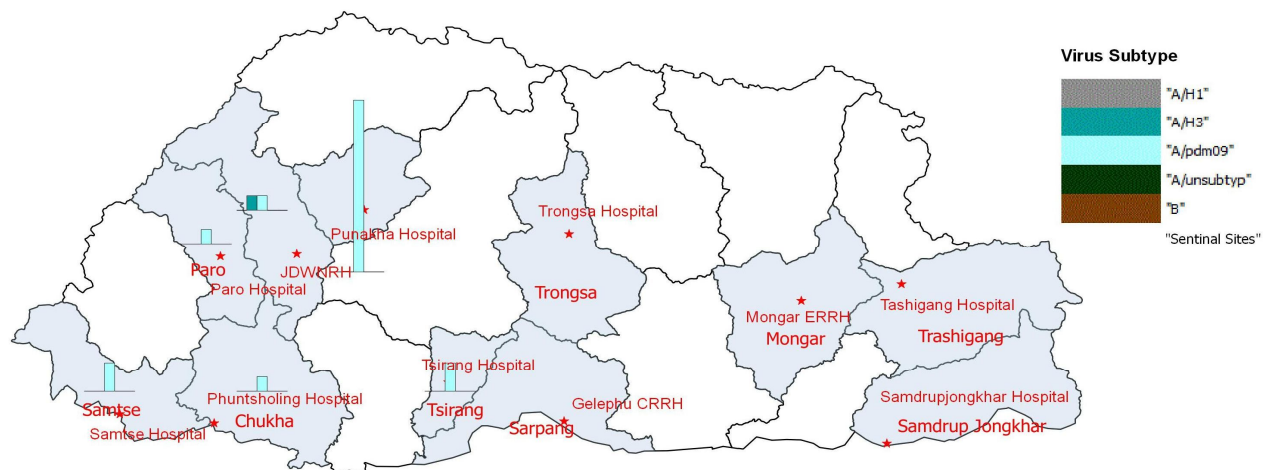

### 3. Virological Surveillance

Of total **36** samples tested by RT-PCR, 19/36 (**52.78%**) were positive for Influenza viruses (Flu A/H3- 1, Flu A/pdmH1- 18 and Flu B- 0) however, most of the sites have not collected samples (Figure 5, 6 & Table 1).

**Figure 5:** Trend of influenza virus subtype by week (**Note: Virological surveillance data is till week 11**)

Out of **12 SARI** samples received and tested by RT-PCR, **6** samples were found positive for **pdmH1**, & A/H3- 0 and negative for RSV and hMPV.

**Figure 6:** Influenza subtype virus by sentinel sites for week 11 (2015).

**Table 1:** ILI/SARI samples received from sentinel sites for the week 10 (2014).

#### 4. Age Distribution among ILI and SARI cases

ILI cases were commonly observed in age group 15-29 and SARI cases were commonly observed in 0-1 years of age group (Table 2).

**Table 2:** ILI and SARI age categorization

	Number	Proportion (%)	Number	Proportion (%)
0-1	35	11.08	9	39.13
2-4	38	12.03	3	13.04

30-64	39	12.34	1	4.35
65+	10	3.16	1	4.35

#### 5. Influenza Outbreak

**Two outbreaks** were reported during the week, one from **Mukhung Pry School**, Mongar dated 05-Mar-2015 and one from **Phochu Dumra Lobdra**, Punakha, dated 12-Mar-2015. The outbreak was immediately investigated by the District Health Officials from Mongar and Punakha Dzongkhag respectively. Rapid test was done onsite and throat swab was collected from symptomatic cases.

A total of 13 throat swabs were received from **Mukhung Pry School**, Mongar and 7 throat swabs were received from **Phochu Dumra Lobdra**, Punakha for Influenza rRT-PCR testing and the test was confirmed that **all** the samples were positive for **Influenza A/pdmH1** subtype viruses.

#### 6. Death due to SARI/Pneumonia

No death cases were reported during the week.
